ABSTRACT

With the introduction of new pension system, government is now trying to provide adequate retirement income not only to the government employees but also to all citizens of India. The Government employees (except the employees of Armed Forces) who have already joined the service on or after 01.01.2004 covered under the New Pension scheme (NPS). In this Scheme, pension will be determined totally on the return of the pension fund at the time of the retirement. The second phase of NPS is being introduced in India from 01.04.2009 for non-government employees. This paper aims to point out the different aspects of pension benefits available under the traditional old pension system (OPS) and under the new pension system (NPS) and also mechanism, performance of New Pension Scheme. An attempt has been made to provide a brief idea about the pension benefits under the Old Pension Scheme and New Pension Scheme of the government employees of different cadres i.e. Cadre A, B, C and D.

Key Words: New pension Scheme, Old pension scheme, Pension fund, Government and Non-government employees.

1. Introduction

Pension reform is one of the burning issues of debate in India. It has been attracting considerable amount of attention in recent years, especially after the liberalization of Indian economy. Major retirement benefits of the public sector employees are Provident Fund, Gratuity, and Pension. Out of the three schemes, Provident fund and Gratuity provide lump sum amount to the employees at the time of retirement. The other scheme, i.e., Pension, provides monthly financial assistance based on the last salary drawn and the number of completed years of service subject to a maximum of 50% of last salary drawn. Public sector employees are also covered by the General Provident Fund Scheme. This scheme is non-contributory where only the employee contributes to the fund subject to a minimum of 6% of salary and the accumulated fund is returned to the employee along with the interest as prescribed by the Government from time to time. Apart from these two benefits, employees (both public sector and private sector) are also eligible to receive Gratuity on the condition of a minimum 5 completed years of service. Gratuity is calculated @ 15 days' salary last drawn for each completed year of service with maximum limit of Rs. 6, 00,000. Pension and Gratuity are 'defined benefit' (DB) schemes while General Provident Fund is a 'defined contribution' (DC) scheme. Employees of organised private sector are covered by the security of Employees Provident Fund, 1952. It is a contributory programme where both employer and employee contribute 10% -12% of monthly salary to the fund. Only after the introduction of Employees Pension Scheme in 1995, they are eligible to get pension but the pension amount is restricted to the 50% of pensionable salary of Rs. 6500 only subject to fulfillment of certain conditions.

2. Objectives of the Study:

- i) To analyze the current pension benefits available to the Government employees in India.
- ii) To identify the scope and benefits of the new pension scheme, and
- iii) To examine whether the pension benefits under the traditional old pension system (OPS) is equivalent to the pension benefits under the new pension system (NPS).

3. DATA COLLECTION AND METHODOLOGY

3.1 Data Source:

The study is based on secondary data. To calculate the retirement benefits of govt. employees, civil servant employees of the Central Government, West Bengal Service Rules, Death-cum-Retirement Benefit Rules (DCRB Rules, 1971) of West

Bengal will be taken into consideration. For the purpose of our study eligibility criteria, pension formulae, contribution of employee and employer (if any), rate of return, etc. are required to be collected from these sources. Data will also be collected from the reports of the Pension Fund Regulatory and Development Authority (PFRDA) about the new pension scheme introduced by the government with effect from 1.1.2004.

3.2 Study period

The relevant data of the employee retirement benefits are collected for the period of 12 accounting years (2004-05 to 2008-09). New pension is started from 1st January, 2004 for the Central Government employees (except Armed Forces) and also some state governments have started converted their defined benefit pension scheme to the defined contribution new pension scheme.

3.3 Tools and techniques for Data Analysis:

After collection of necessary data, these are suitably rearranged, classified and tabulated as per the requirements of the study.

Salary means the basic salary and dearness allowance. Hence, we consider 'Salary' for the purpose of our study is aggregate of basic pay and dearness allowance.

The trend of growth rate of Dearness Allowance, as declared by the Government from time to time, is calculated by fitting trend equation which is shown below;

$$Y_t = a + b.X_t$$

Where, Y= Predicted value

a = Intercept

b = Regression Coefficient

t = Time

For determining statistical significance of the retirement benefits under the traditional old pension system (OPS) is equivalent or not to the retirement benefits under the new pension system (NPS)'t' statistic is computed as follows:

$$t = \frac{x_1 - x_2}{S.E. (x_1 - x_2)}$$

Where, x_1 = mean pension benefit under old pension system (OPS)

x_2 = mean pension benefit under new pension system (NPS)

S.E. ($x_1 - x_2$) = standard error of ($x_1 - x_2$)

4. Discussion

In this article, we would like to have an attempt to focus on the retirement benefits of the Government employees under old, traditional pension system vis-à-vis the benefits under New Pension System (NPS).

However, traditional old age retirement income security covers less than 11% of the current working people in India. Almost 90% of the total workforce is out of any sort of formal income security system. Moreover, most of the beneficiaries belong to salaried class under both of the public sector and the organised private sector.

In post- independence era, Central Government, State government and Union Territories provide 3-tier retirement benefits to their employees in the form of pension, gratuity and provident fund. Government also provides guarantee regarding retirement benefits to the large number of pension schemes administered by the public and private bodies, autonomous institutions. The Central government alone administers separate pension programmes for civil employees, defense personnel and workers in telecommunication, railways and postal departments. Such schemes are non-contributory, defined benefit basis except the scheme of General Provident Fund. In GPF, only worker contributes to the fund minimum @ 6% of the salary.

Retirement benefits form a very important part of the old age income security especially for salaried persons. Major retirement benefits in India are provident fund, gratuity, and pension. The first two provide lump sum amount at retirement while pension provides monthly assistance. Employees of both the public and private sectors receive gratuity the cost of which is entirely borne by the employers. Participation in provident fund is also compulsory for employees in both the sectors. Government employees come under unfunded, defined benefit pension system. The benefit rate is roughly 50% of the last salary drawn.

4.1 TYPES OF RETIREMRNT BENEFITS

Retirement benefits can be classified into two groups:

a) Defined Benefit System (DB):

In Defined benefit system employers are responsible to pay the benefits to the employees i.e. benefit to be received by the employee is assured. Under funded DB system, the employers will have to bear actuarial risk (that the benefit will cost more than that expected) and investment risk (that assets invested will be insufficient). Employees pension scheme (EPS) is an example of defined benefit scheme.

Now-a-days, defined benefit under traditional pension system faces a variety of problems. Main problems of the traditional system are:

- i) It creates an increasing financial burden on the Government with the hike of salary, increasing trend of new appointments, etc.
- ii) Demographic pressure with the increasing average life expectancy.
- iii) Low coverage of the formal pension system.
- iv) Fund collected under GPF is not separated and invested. So, the fund operates as a pay-as-you-go basis causing a financial pressure at the time of redemption.
- v) Investment restrictions of various funds like EPF and EPS create the increasing gap between benefit and fund wealth.

b) Defined Contribution System (DC):

This is a type of plan where the employer's liability is limited to the amount of agreed contribution and risks will be borne by the employee. Employee's provident fund is that kind of plan.

Advantages of DC system:

- i) It reduces the burden of paying pension by the employer as they are only liable to pay their own contributions.
- ii) In this system participants enjoy the option to choose fund manager. He can invest his money to such fund as he thinks best for him and also can divert his portfolio from time to time.
- iii) Individual accounts are maintained in this system. So, the latest position of the account could be known by the participants at any point of time.

4.2 NEW PENSION SCHEME

After a long debate Government of India has launched the New Pension System (NPS) w.e.f. 01.01.2004. Primarily, this system is introduced for the employees who have joined in their service of Govt. of India on and from 01.01.2004. Now several states have adopted the new pension system for the newly appointed employees. From 01.04.2009, this system is opened to every citizen of India of the age falling between 18 to 55 years.

The salient features of the New Pension System are:

- i) New Pension Scheme is a defined contribution scheme where the employer's liability is restricted only to the contribution to the fund only.
- ii) Unlike traditional pension system, employee has to contribute to the pension fund for future benefit.

iii) No indexation benefit is available to the pension benefit as the subscriber has to purchase annuity at the time of retirement.

iv) Entire investment risk will be borne by the subscriber. Benefits of two employees of same category & service period may be different on the performance of selected option & pension fund managers.

v) Benefit of General Provident Fund will not be available with the introduction of New Pension System.

vi) Two types of schemes are available. Tier I is non-withdrawable fund upto the age of 60 and the subscriber is required to invest at least 40% of accumulated fund in any annuity plan offered by the life insurance companies. Tier II is a withdrawable scheme where the subscriber can draw from the accumulated fund or even quit from the scheme.

Each subscriber has the right to select any one of the pension fund managers and also to change the manager. A subscriber may choose any one the three options available now:

- i) Growth option i.e. comparatively risky, equity-oriented fund.
- ii) Moderate fund i.e. low risk, corporate debt and security-based fund.
- iii) Cautious fund i.e. risk-free Government security-based fund.

Auto choice option is also available in case of failure of selection of any option by the subscriber.

4.3 Case Study

Let us consider an illustration to find out the benefit under New Pension System as compared to the benefit under Old Pension System in respect to the employee belonging to four different groups i.e. Group-A, Group-B, Group-C, and Group D cadre of the government with the minimum Grade Pay of each scale of each group. This illustration is based on the following necessary assumptions:

i) Data regarding Pay in Pay Band, Grade Pay, and Dearness allowance are taken from the West Bengal Service (Revision of Pay and Allowance) Rules, 2009.

ii) The employee will retire at the age of 60 after completion of 33 years of service. Employee is eligible to get full pension after completion of 20 years of service.

iii) The employee will retire after enjoying the 3rd promotion in 8-16-25 year under Career Advancement Scheme.

iv) Only Employer's contribution @ 10% of salary (Basic+D.A.) to NPS is considered to create a fund for pension wealth of the employee.

v) Fund value under the new pension scheme of the employee will be accumulated at the rate of 8% p.a. after deducting all the expenses and charges through out the whole contribution period.

| 32 | 31079 | 33358 | 34964 | 36600 | 38284 | 34857 |
| 33 | 34444 | 36945 | 38698 | 40483 | 42320 | 38578 |

Pension of the different categories of employees (i.e. Group-A, B, C and D) under the traditional or defined benefit old pension system (OPS) are shown in the Table 1, 3, 5 and 7. From these tables, we can say that amount of pension will be more than doubled if

the employee retired after 33 years of service instead of 20 years though they are entitled to receive full pension benefit i.e. 50% of last salary (Basic plus dearness allowance). On the other side, Pension of the different categories of employees (i.e. Group-A, B, C and D) under the traditional or defined benefit old pension system (OPS) are shown in the Table 2, 4, 6 and 8 and the expected return from the pension fund of the concerned employees will be more than four times if they employee retired at the end of 33 completed years service in lieu of 20 years.

To test whether there is statistical difference between the pension benefits under the traditional old pension system (OPS) and the pension benefits under the new pension system (NPS)'t' statistic is applied.

TABLE 9:'t' test results

| Group | Mean Pension | | Standard error | t value |
|-------|--------------|---------|----------------|---------|
| | OPS | NPS | | |
| A | 40681.2 | 42470.4 | 2836.74 | -0.6307 |
| B | 32360 | 33271.2 | 2242.22 | -0.4064 |
| C | 22854.8 | 23509 | 1589.21 | -0.4116 |
| D | 20373.4 | 21116.2 | 1420.98 | -0.523 |

Table 10: Decision Criteria (at 5% level of significance)

| Group | Observed Value | Tabulated Value (two-tailed) | Decision |
|-------|----------------|------------------------------|-----------|
| A | -0.6307 | 2.05 | Accept Ho |
| B | -0.4064 | 2.05 | Accept Ho |
| C | -0.4116 | 2.05 | Accept Ho |
| D | -0.523 | 2.05 | Accept Ho |

5. Findings:

From the above tables (Table 9 and 10), we observe that the average pension (taking pension from 20 years to 33 years) under the New Pension Scheme is more than the pension under the Old Pension Scheme. However, the difference of the pension benefits under the both schemes is not more than 5%.

Applying the 't' test at 5% level of significance, we can say that there is no significant difference between the pension benefits under the traditional old pension system (OPS) and pension benefits under the new pension system (NPS).

6. Conclusion

i) Pension under the old scheme (OPS) is a defined benefit scheme where the Government takes the obligation to pay the benefit available to the employees after retirement. Employees are not required to make any contribution to any fund and they are certain to get benefit from the employer.

ii) Pension under the new scheme (NPS) as introduced by the Central Government w.e.f 01.01.2004 and also most of the state Governments is a defined scheme. Under this scheme both employees and the employers are required to contribute 10% of the monthly salary to pension fund and the accumulated balance at the time of retirement is used to purchase annuity from the annuity providers. According to the nature of the pension fund as chosen by the employee, investment risk will be borne by the employee and the employer is only responsible to pay the contribution of the concerned employee to the fund.

iii) It is observed that pension under old scheme is protected against the inflation as pension amount is increased from time to time through dearness relief by the order of the finance department of the government from time to time. But there is no such provision under the new pension scheme.

iv) Employees retired before 31.12.2003 or before are eligible to receive full pension benefit (i.e. 50% of last salary drawn) after completion of 33 years' of service. After implementation of recommendation of the Pay Commission, eligible tenure of service is reduced to 20 years' from 33 years'. This change leads to increase of the benefit to the employees who are retired before the completion of 33 years' service (between 20-32 years') by 1.5% to 20%.

v) It is found that pension benefit of the employees retired after 20 years of service under old, defined benefit scheme is less than 50% of the pension benefit of the employees retired after 33 years.

vi) It is observed that pension benefit of the employees retired under old, defined contribution scheme after 20 years of service is almost 23.5% of the pension benefit of the employees retired after 33 years.

NPS is more profitable than the old DB pension system as the number of years of service is increasing. The expected return on pension wealth depends on the performance of the fund, types of fund as well as the overall performance of the market. It is risky in the sense that no one can assure about the amount of return at the retirement.

At the time of introduction of NPS, Government's expenditure towards pension will be increased in order to provide unfunded defined benefit pension to the employees who are not covered by the NPS and at the same time to contribute to the pension fund for the employees covered by NPS. Since New Pension System is a funded defined contribution scheme, liability of Government is limited to the contribution only (i.e. 10% of salary) and with the passage of time, total pension liability will be reduced. It also provides the self-employed personnel, employees of unorganised sector, etc. the scopes to grow a habit of savings for old age income security
